

9025 Multi-function Control System

Pumptec's multi-function regulator, which surface mounts in any location, features 0-100 PSI adjustment, full bypass agitation/prime valve, 3 high pressure ports, 3 bypass ports and 0-200 PSI liquid filled gauge.

The Achilles heal of every 12V system is excessive by-pass pressure.

The unique design of the 9025 maintains nearly constant pressure in spray or bypass, thereby protecting the electrical system from high amperage draw during bypass...the most common cause of 12 VDC system failure.

- *Mount controls where you want them, in any location...simply, with four screws.*
- *Sprayer upgrading has never been more simple or inexpensive.*
- *Pumptec's new Multi-Function Control System integrates precise pressure regulation, gauge, agitation valve into one simple control module.*
- *The 9025 is unique in the industry because it is specifically designed for the 12 VDC pest control and turf sprayer industry.*
- *The liquid filled gauge is mounted next to the controls allowing simple and precise system set up and adjustment.*
- *The Ball Valve provides simple priming, agitation, flushing or dumping of pressure during system set up.*
- *The Six port design, three on the pressure side plus three on the bypass side, provides maximum plumbing configuration flexibility.*
- *Imagine the simplicity, bolt down the pump, bolt down the control and connect a hose between the two... "now that's simple."*
