

# ABSOLUTE PROPORTIONING PUMPS™ and systems

Now you can follow label application rates  
**ABSOLUTELY**

Absolute Proportioning Pumps provide direct mechanical linkage between two integral pumping heads.

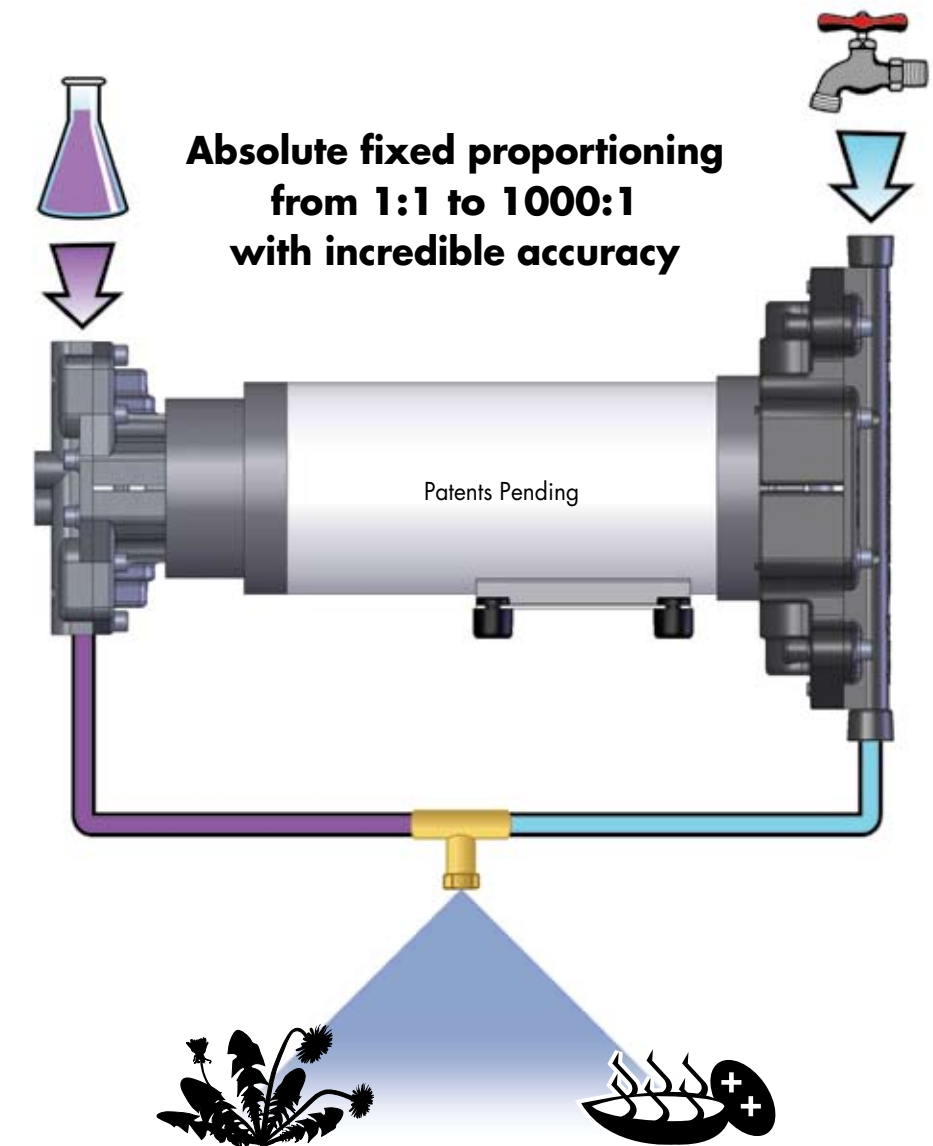

- If flow (RPM) changes, proportions remain absolutely constant.
- If pressure (PSI) changes, proportions remain absolutely constant.

The Absolute Proportioning Pump is a completely self-contained proportioning pump unaffected by changes in flow or pressure and capable of 36:1 or any other fixed proportion from 1:1 to 1000:1 with incredible accuracy.

The Absolute Proportioning Pump is **not** a water driven chemical proportioning/dosing injector requiring a pump to produce the water flow to power the proportioning/dosing and is **not** a venturi type system where accuracy is affected by any flow and/or pressure changes.

The Absolute Proportioning Pump is capable of direct spraying or precise volume batching...either with incredible accuracy.

The Absolute Proportioning Pump provides direct mechanical linkage between two integral pumping heads.

**Absolute fixed proportioning  
from 1:1 to 1000:1  
with incredible accuracy**

THE FACTS

## Benefits of Pumptec's Ingenuity:

- **Savings**

**NO MORE CHEMICAL TANKS**, no need for larger vehicles, no more high fuel bills, no more expensive/noisy pumping systems, no more mixing, no more spilling or handling issues, no more wasted chemical, no more re-treatment due to inadequate application, no more estimating chemical costs, no more wasted time. Get more jobs done each day absolutely correctly.

- **Safety**

**NO MORE CHEMICAL SPILLS**, no fumes, no unused chemical disposal, no water connection issues, no over application concerns.

- **Control**

**NO MORE GUESSING**, absolutely assures compliance to label application rates, eliminates over application of expensive chemicals

THE RESULT

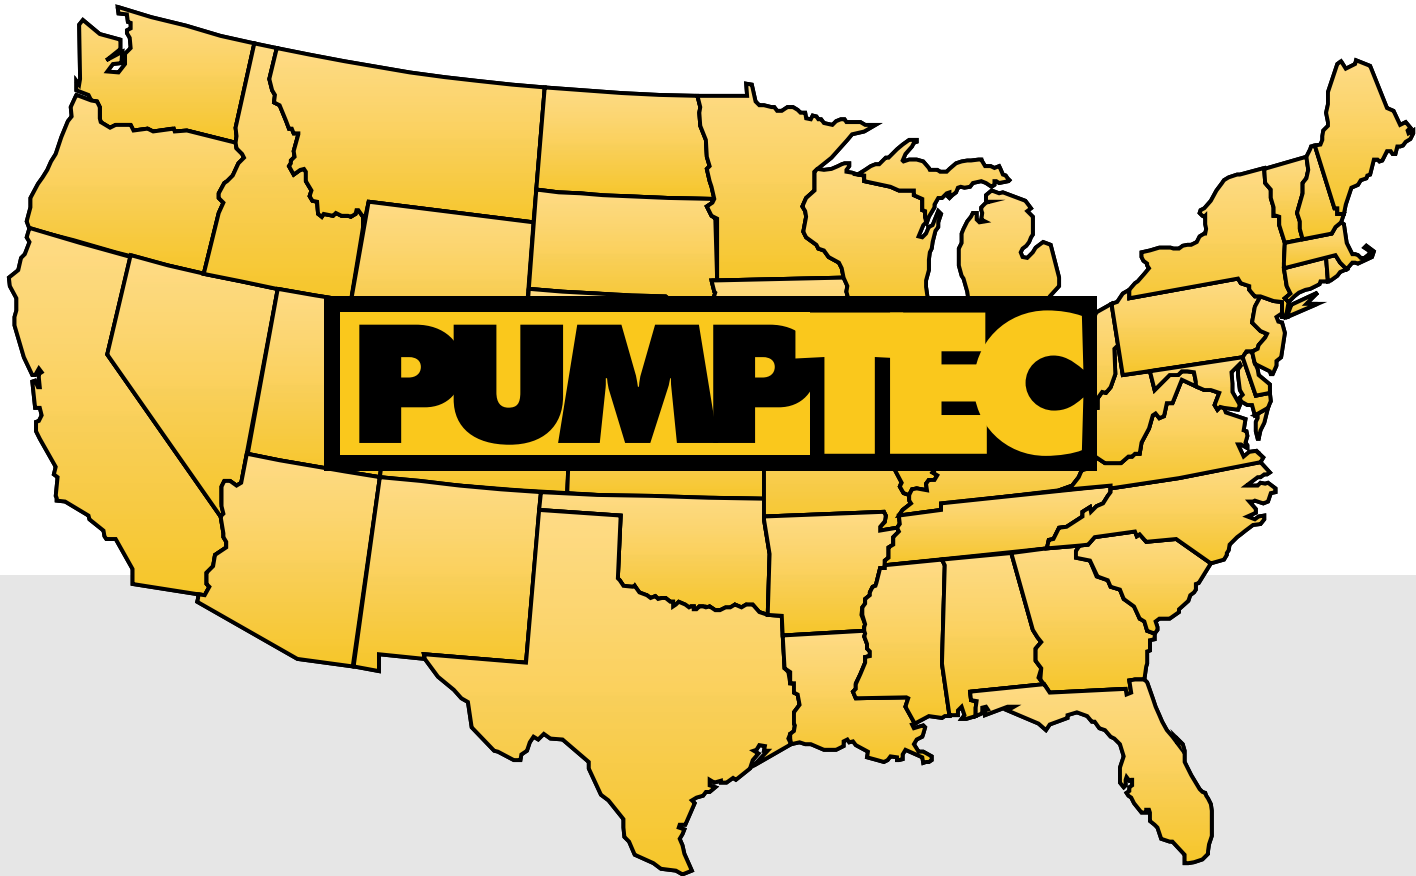

## IMAGINE THE IMPACT ON YOUR BUSINESS

- Pre-batch in separate containers for exact square footage of each job that day
- Mini-batch exact spray amount for small custom jobs
- Eliminate the cost of calculating, proportioning and mixing
- Eliminate the cost of disposal of excess spray solution
- Eliminate the cost of disposal of chemical being in solution too long
- Eliminate the cost of chemical lost for being in solution longer
- Eliminate the cost of cleanup
- Reduce the size and operating cost of your fleet vehicles
- Increase value of your fleet vehicles at trade-in time
- Use your customer's water, without connection issues, when possible
- Avoid the possibility of losing your chemical supplier's guarantees due to inaccurate application rates or inadequate record keeping.
- Eliminate the cost of re-application due to improper application rate
- Being responsible, not over-applying, avoiding the situation where a label reads 600 mL per 100 L and your employee says to himself, "Is that one or two glugs in my 50 gallon tank? Ah...I'll just give it a glug and a half."
